THROUGH ONGOING DEVELOPMENT OF ITS CONNECTORS, PRECI-DIP CREATES OPPORTUNITY FOR ADVANCES IN AUTOMATION

Staying ahead of the advances in automation technologies is one of preci-dip's core competencies. Manufacturers seek to build advanced higher-density packaging technologies with faster and smaller products. Recognizing these developments we are able to meet the demands of the industry.

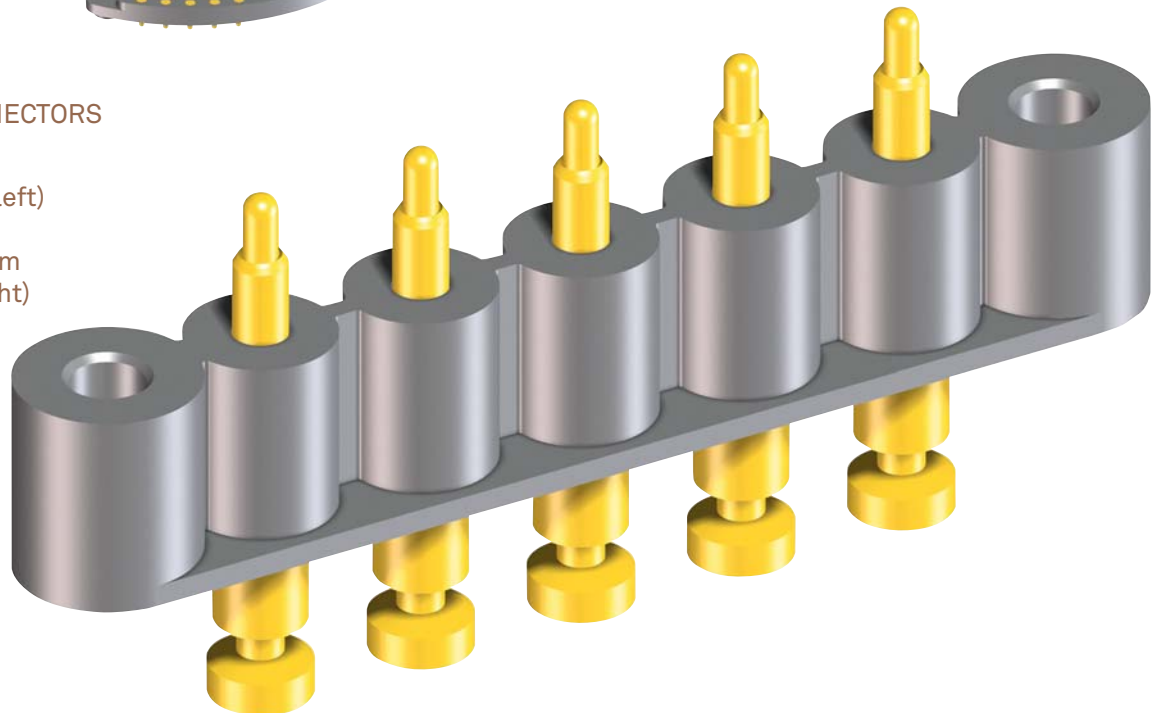

SPRING-LOADED CONNECTORS

- Pair of connectors for electrical motors (left)
- Pair of connectors – bayonet fitting system for camera lenses (right)
- Combined SLC/Pad connector for stackable modules

MAKING THE GRADE

Low contact resistance and extremely high current density provide our products with reliable design specifically engineered for high mating frequencies. Moreover these components are durable, in accordance with international quality and liability standards.

Finally, they are engineered and developed in a variety of specifications to meet your diverse requirements.
